Going All Digital!

Who? →

Why? ↓

- Higher Reliability
- Ease of Maintenance
- More Vendor Choices
- Interoperable
- Scalable
- Lower Cost
- Global Standards
- Plug and Play Simplicity

More than ever school systems need to keep pace with technological change to properly prepare students for our globally competitive world.

Since 1945, Azbell Electronics has advised, informed, and assisted school systems, colleges, and universities across the Southwest US on the correct and most cost effective way to implement newly adopted technologies.

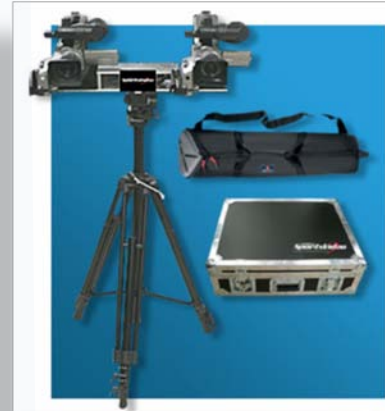

Regardless of size or complexity, Azbell's experienced approach in the application of technology follows a proven methodology:

- ▷ *State the Need and End Result in non-technical layman's terms.*
- ▷ *Determine if the scale of the project would benefit from a technical advisory engagement.*
- ▷ *Translate the non-technical description into an array of vendor and product choices along a price continuum.*
- ▷ *Discuss installation needs, timeframes, training, maintenance, or sparing needs.*
- ▷ *Assist to determine acquisition methods, budget considerations, and funding sources.*
